**African marketing trip of Panzer Technologies with it's armoured vehicles
though Africa with the Ultra Seal product used in its wheels**

To Whom It May Concern:

Panzer Technologies undertook a marketing trip through Africa with two of its newly developed armoured vehicles that stretched from South Africa up to Uganda and back again. The trip was completed in 6 weeks time and negotiated some of the worst possible road conditions in Africa.

The Ultra Seal product was used on both our armoured vehicles and very good results were obtained. The Ultra Seal was used on all road wheels of the armoured vehicles and proof to be very effective in maintaining air pressure within the tyres and had no effect on the rolling resistance of the wheels.

We could recommend this product to be used on any vehicle.
