11 April 2007

To whom it may concern,

On Tuesday the 23<sup>rd</sup> of January 2007, several Bandag technical personnel attended a demonstration of the *Ultraseal* product at the Bandag head office in Sunny Rock.

The demonstration involved a radial passenger vehicle tyre containing *Ultraseal* being run over a board of nails. The following was noticed:

- 1) *Ultraseal did seal the puncture wounds,*
- 2) *There was no discernable change in tyre pressure after the puncture*
- 3) *The vehicle was able to operate normally after the puncture*

Although the impact of *Ultraseal* on the longevity of tyres or on the retread process was not measured I believe *Ultraseal* will benefit fleets in preventing puncture related tyre breakdowns.

Brian Clarke
