Auto-Electrical Sales and Service

Specialists in Earthmoving and Plant Hire Repairs

I thought you would be interested in having some feedback on the use of your Tyre Sealant product.

I run three vans, and have your product in all our tyres fitted to same. In my business we have to go onto building & motorway sites, scrap yards, etc., which are all rough terrain, and the later full of bits of metal nails etc. Before I used the sealant I was constantly having to pay out for puncture repairs, and at the very least the cost was £10 per week, and in somecases a new tyre required. It doesn't sound like a lot of money but over a year your talking in excess of £500.

I have had the sealant in the tyres for approx. a year now and have pulled out nails, wood & metal, the tyres have not punctured and are in good condition, and the sealant has not done any harm whatsoever to the tyres.

In my leisure time I ride a Harley Davidson and am a member of a Harley Owners Club. It was one of the members who introduced me to the sealant, and most of the club members now use the product in their bike tyres, and cars.

I have to admit I was rather sceptical when first introduced to the product as it sounded to good to be true, but having used it I would have no hesitation in recommending it to anyone who wants to save time, money and the inconvenience that punctures cause.

Many Thanks,

Yours sincerely,

John Sloan
